

Corona Virus

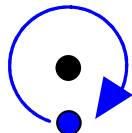

This

story

is

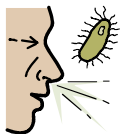

about

pandemics

and the

Coronavirus.

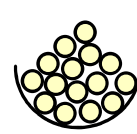

A

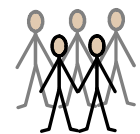

pandemic

is when

many

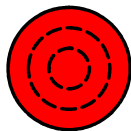

people

in

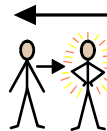

a

large

area

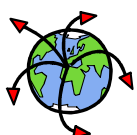

become

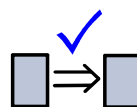

sick.

A

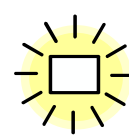

pandemic

is usually

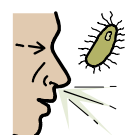

caused

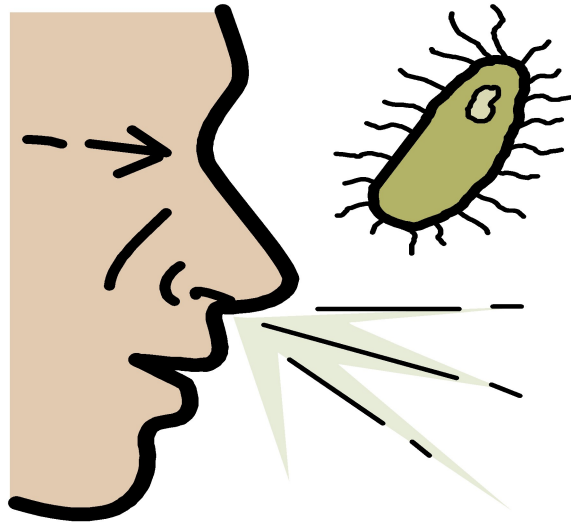

by a

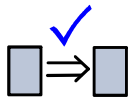

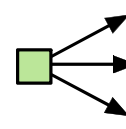

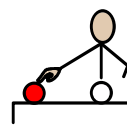

new

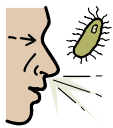

virus.

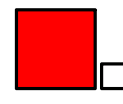

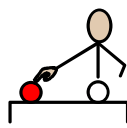

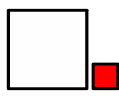

The Coronavirus is a virus that is spreading fast

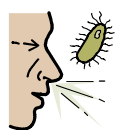

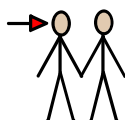

and causing a pandemic around the world.

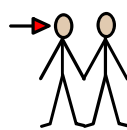

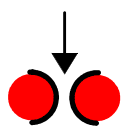

Viruses are so small that only a big

microscope to see them. People can't see if a

virus is near them.

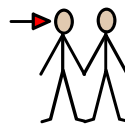

People are smart.

Even though

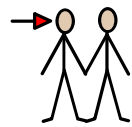

they

can't see the

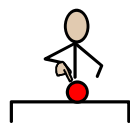

Coronavirus,

they

know

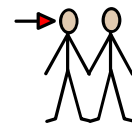

what

to

do.

They

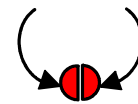

use healthy habits

and

work together to

make

it

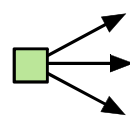

harder

for the

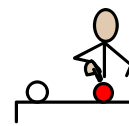

Coronavirus

to

spread.

This

helps

to keep

people

healthy

during

the

pandemic.

People

wash their hands

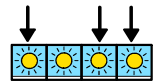

really

well

and

often

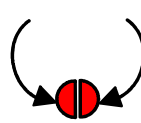

during

a pandemic.

Adults

make

sure

kids

know

how

to

wash their hands

well.

And,

adults

remind

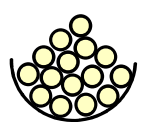

kids

to

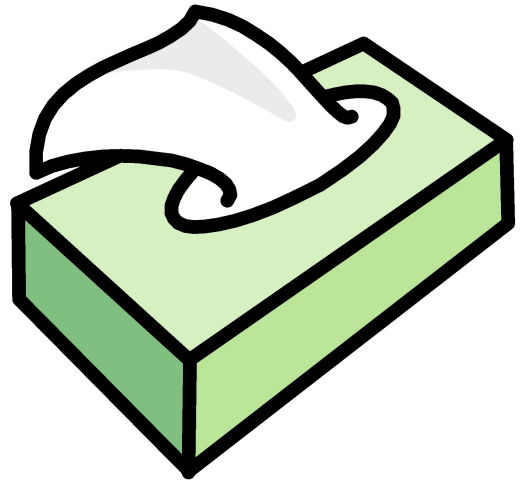

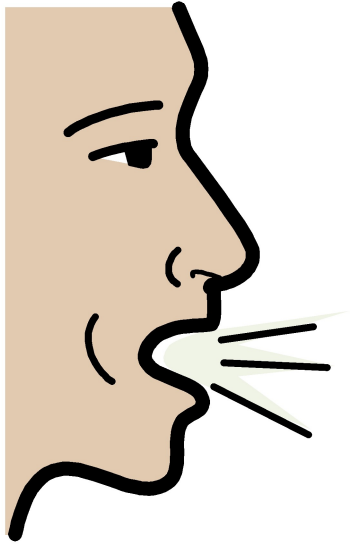

wash their hands

a

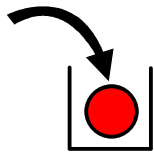

lot.

People

cough

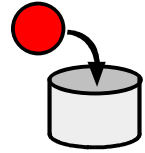

into

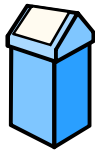

a tissue

+

and

put

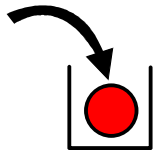

it in a bin.

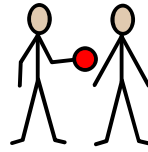

You can

cough

into

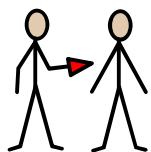

your

sleeve

if

you

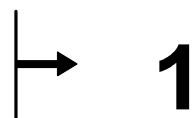

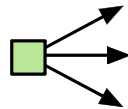

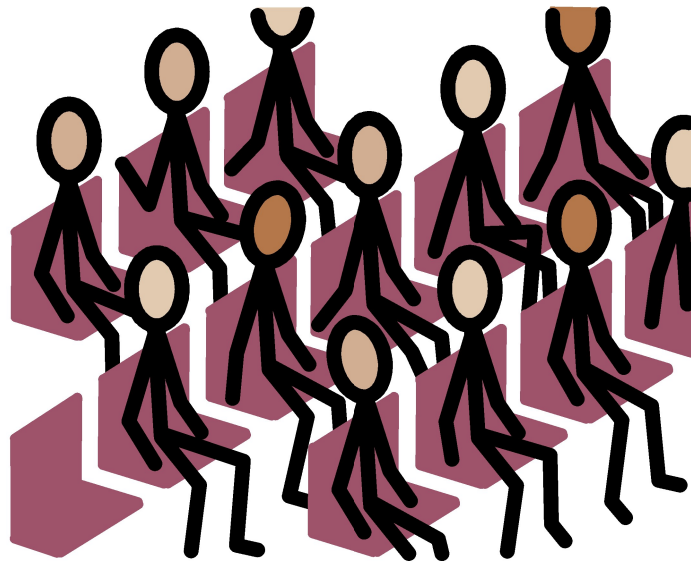

can't find

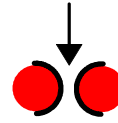

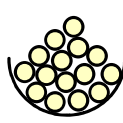

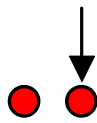

a

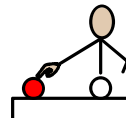

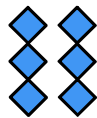

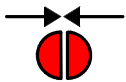

tissue.

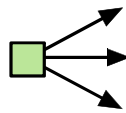

The Coronavirus has been spreading fast from one

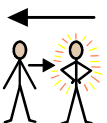

person to another. If many people are close

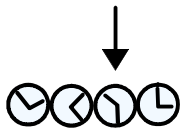

together in the same place, that makes it

easier for a virus to spread. More people

become poorly.

Sometimes

schools

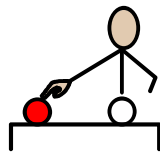

close

during a

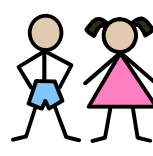

pandemic.

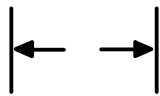

That

way,

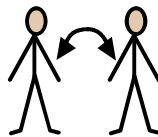

children are

farther apart

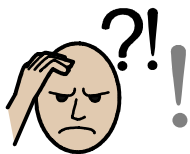

from

each other

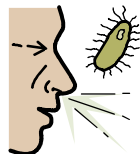

and it is

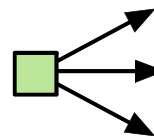

harder

for a

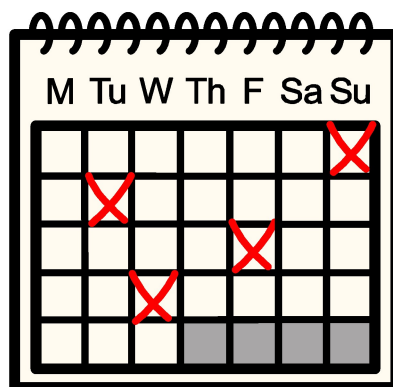

virus

to

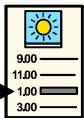

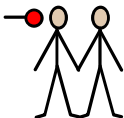

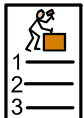

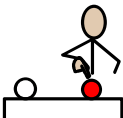

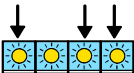

spread.

 A pandemic can mean people need to

 rearrange their holiday plans. This is because

 holidays are often in fun and crowded

 places. People try to avoid crowds in a pandemic.

 They may rearrange their trip.

Grown ups

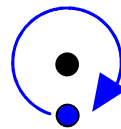

are

learning

more

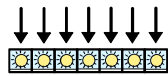

about

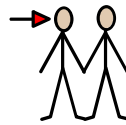

the

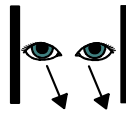

Coronavirus

every day.

They

watch

the

news

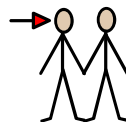

and

look

for

information.

They

are

watching out

for

me,

too.

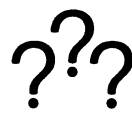

If

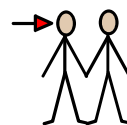

I

have

questions,

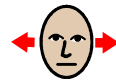

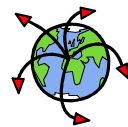

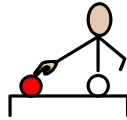

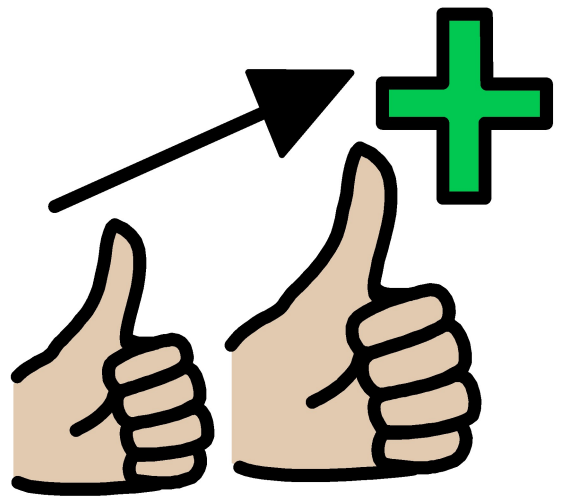

they

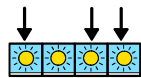

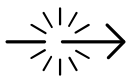

can

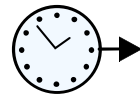

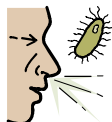

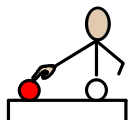

help.

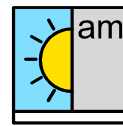

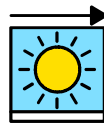

It is good to know that pandemics do not

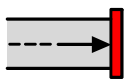

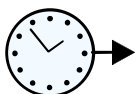

happen very often. It is also helpful to

remember that the Coronavirus pandemic will

stop; probably not by tomorrow morning, but it

will end.
